TTSS course

Our course is addressed to colorectal surgeons experienced with minimally invasive rectal surgery, included the transanal approaches. The course is focused on the step-by-step teaching of the TTSS technique. TTSS is a strategy developed with the aim to take the best of both worlds: from traditional TME the well-established TME dissection, learned by generations of surgeons and proven to be safe, efficacious and equally reliable if performed open, laparoscopic or robotic; and from TaTME the idea of a transanal transection (TT) and the single-stapled (SS) anastomosis, even if with key technical differences that will be highlighted during the course.

An expert national and international faculty will guide participants in understanding the rationale, indications, patients' selection, key steps and potential pitfalls of the TTSS technique.

The aforementioned goals will be achieved through in-depth didactic lectures, live surgery and hands-on training.

Friday
MAY 23rd

AGENDA

9:00-9:15	Welcome and Introduction
9:15-9:30	TME: how to do it
9:30-9:45	Techniques for rectal transection and anastomosis: options and imitations
9:45-10:00	TTSS: indications and step-by-step description of the technique
10:00-10:15	Evidence about TTSS <i>Clinical studies</i>
10:15-10:20	Presentation of live surgery case
10:20-13:00	Live surgery streaming
13:00-14:00	<i>Lunch</i>
14:00-16:30	Hands-on training
16:30-17:00	Wrap up
17:00	<i>End of the course</i>
